Content

Viscose

Polyester

Detergent

Material

Viscose

Viscose fibre is produced from cellulose pulp. Cellulose is dissolved in alkaline solution by a chemical reaction with carbondisulphide and then spun to fibres in an acid spinning bath. The fibres are washed, dried and cut to intended fibrelength.

Polyester

Polyester fibre is produced from terephtalic acid and ethyleneglycol, which react through condensation to polyester resin. The molten resin is spun to fibres through spinnerettes and cooled with air. Fibres are then cut to intended fibrelength.

Detergent

The product contains a fragrance-free detergent, comprising:

Ethylalcohol, non-ionic surfactant, amphoteric surfactant, odour neutraliser, preservatives, antifoaming agent and pH adjuster.

The surfactants are fully biodegradable.

The preservatives may be toxic to aquatic organism. Do not dispose in nature

Date of issue 2009-03-17 Art.no 190594

Revision date

SCA Hygiene Products AB, 405 03 Göteborg, SE.

Production

This product is produced for SCA in China. The production site is BRC accredited

Disposing / destruction of used product

This product is mainly used for industrial processes and might through use be contaminated with different substances. This will determine how the used product will be handled / disposed of / destructed. The product itself is suitable for incineration. Contact local authorities before destruction.
